

WatSmart Secure™ POLICY

Secure employee practices start with effective security policies.

Establish a Secure Working Environment

Establishing and enforcing an effective security policy is one of the best steps you can take to prevent - or minimize - the losses associated with a security breach.

POLICY is intended to be complimented by **WatSmart Secure Education (EDU)** which teaches your employees how to incorporate security policy awareness into their daily business workflow. The synergistic combination of policy development and security training provides your organization with a truly effective strategy for preventing security breaches and data loss.

An effective IT security policy is one that is tailored to suit an organization's particular needs. **WatSmart Secure POLICY** does just that. **WatSmart Secure POLICY** starts you off with an affordable 3-policy bundle. Through a consultation with a WatSec security expert, this package produces three core policies that are custom-tailored to meet your needs. Additional policies may also be included for an added charge.

Upon completion, your organization will receive custom policies covering:

- IT vulnerability management
- Data and configuration back-up and restore
- Password management
